Introduction and Project Overview

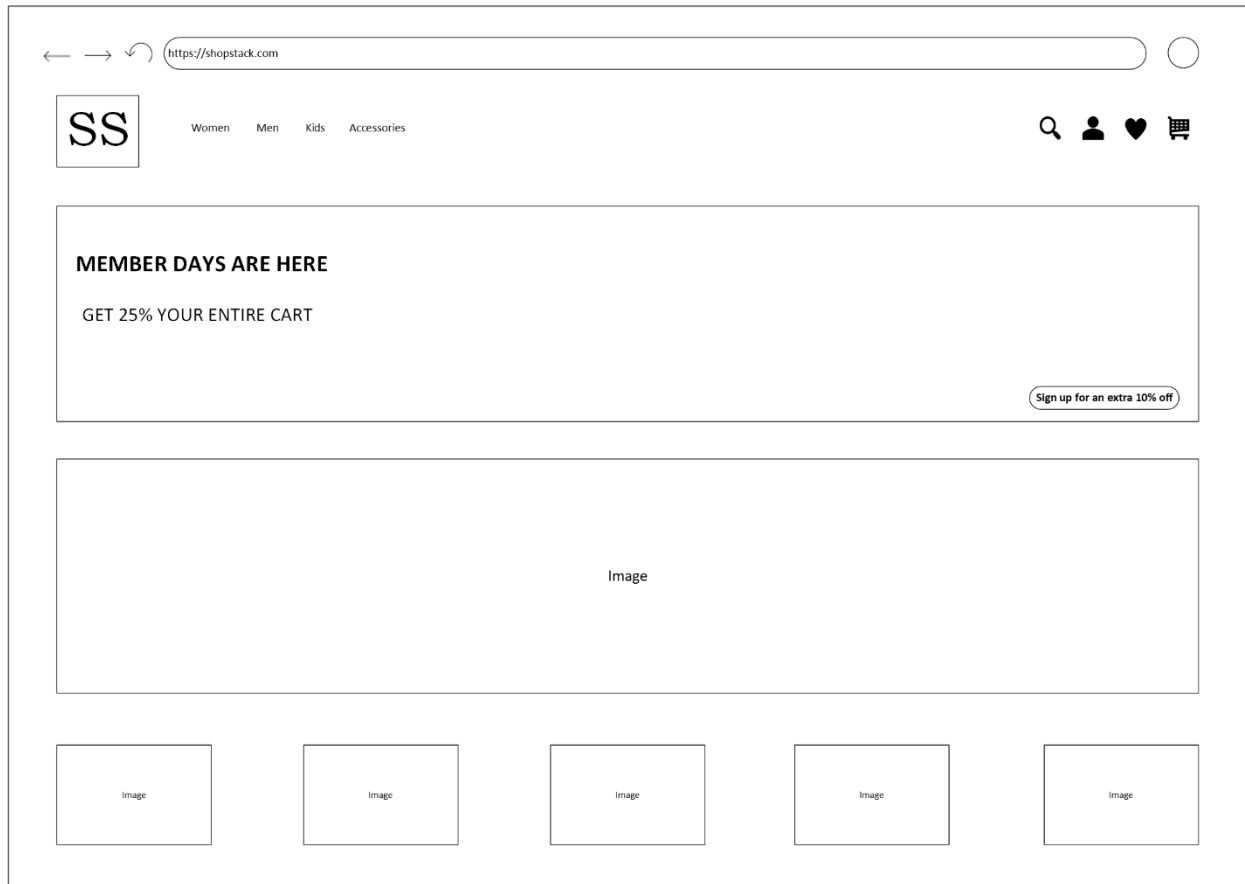

This is a first draft of the External Design Document for our project, ShopStack, which is an online shopping website that provides users with a friendly and seamless shopping experience.

This draft of the External Design Document will outline the wireframes for the most top-level features of our site and provide initial screenshots of our progress of the project.

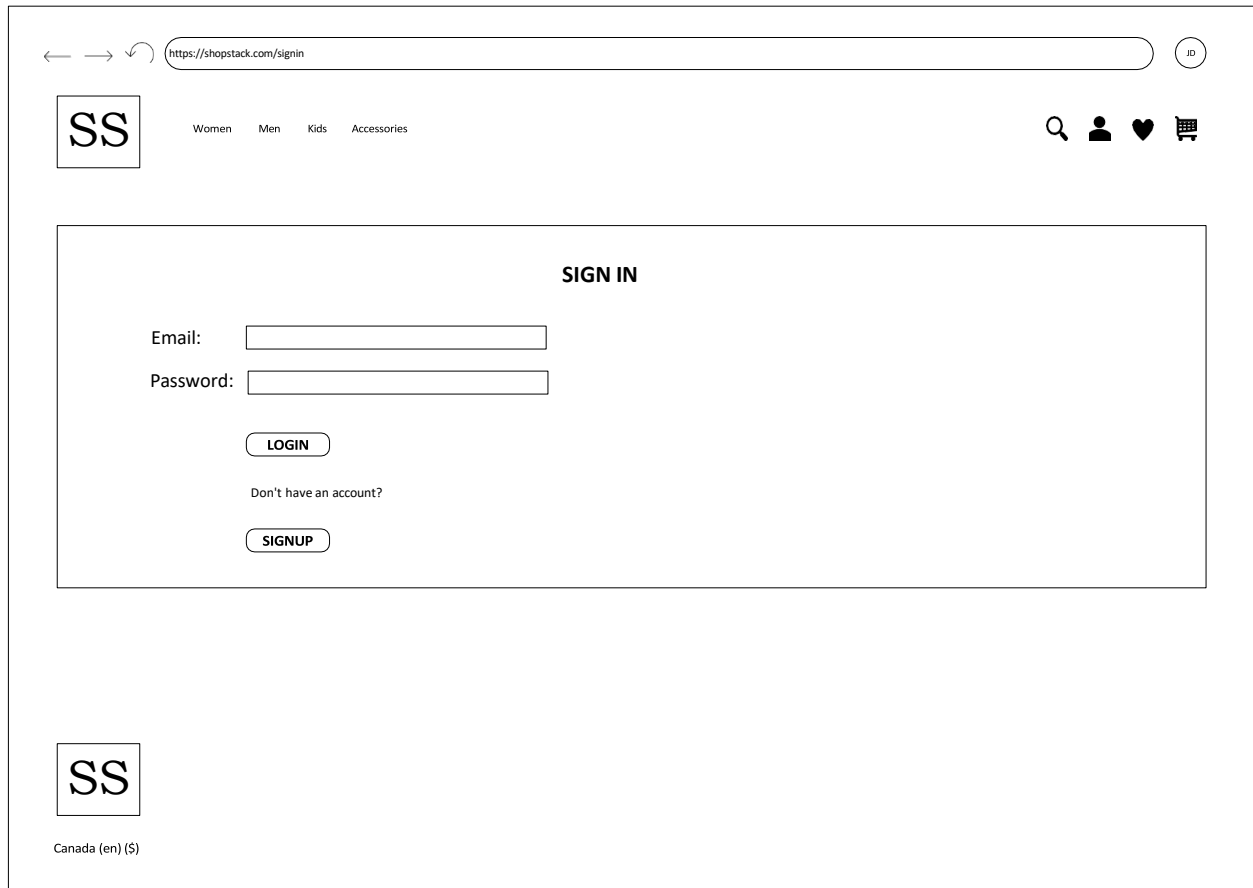

This document will also provide screenshots of the Agile Project tracking tool, Trello, which includes Product Backlog and Task Board.

The screenshot shows a web browser window with the address bar displaying `https://shopstack.com/signin`. The page features a header with the 'SS' logo, navigation links for 'Women', 'Men', 'Kids', and 'Accessories', and icons for search, user profile, heart, and shopping cart. A user ID 'JD' is visible in the top right corner. The main content area is titled 'SIGN IN' and contains a form with 'Email:' and 'Password:' labels, each followed by a text input field. Below the password field is a 'LOGIN' button. A link 'Don't have an account?' is positioned below the login button, followed by a 'SIGNUP' button. The footer includes the 'SS' logo and the text 'Canada (en) (\$)'. The entire page is enclosed in a thin black border.

The screenshot displays the Postman application interface. The main workspace shows a PUT request to the endpoint `http://localhost:4000/api/products/69260b84036c32ec2f5c205c`. The request body is a JSON object:

```
{  "name": "Cheese",  "description": "Gouda Cheese",  "price": 15.00,  "inStock": true}
```

The response status is 200 OK, and the response body is a JSON object:

```
{  "_id": "69260b84036c32ec2f5c205c",  "name": "Cheese",  "description": "Gouda Cheese",  "price": 15,  "inStock": true,  "createdAt": "2025-11-25T20:03:16.300Z",  "__v": 0}
```

The terminal at the bottom shows the command `npm run start` being executed, and the server is running on port 4000. A message indicates that MongoDB is connected.

On the right side, there is a "Build with Agent" section with the text: "AI responses may be inaccurate. Generate Agent Instructions to onboard AI onto your codebase."

At the bottom right, there is a notification: "You have Docker installed on your system. Do you want to install the recommended extensions from Microsoft for it?" with buttons for "Install" and "Show Recommendations".
